

**ZIRCONIA FIBRE SANDING DISCS**

**ZIRCONIA FIBRE SANDING DISCS**

Smith & ARROW Zirconia Fibre Sanding Discs are excellent for sanding stainless steel, mild / black steel, all metal, aluminium, wood, fibreglass, plasterboard and painted surfaces. These discs are coated with heavy-duty abrasive fiber designed for jobs ranging from heavy stock removal to surface blending. Made from zirconia, they will significantly outlast brown aluminium oxide discs. These premium fibre discs offer unparalleled performance in applications wherever rapid material removal is required. Zirconia Sanding Discs are available in all sizes in 40, 60, 80, 120 grit.

[Ceramic Fibre Sanding Discs](#)

**What are Ceramic Sanding Discs?**

Ceramic Grain Sanding Discs are resin bonded and closed coated. These discs will outlast both aluminum oxide and zirconia discs while cutting faster and cooler. Ceramic grain is best suited for grinding and sanding stainless and other tough metals. The grains on these sanding discs micro-fracture to enable a continuous supply of the sharpest edges, and they are more resistant to heat. When considering a ceramic disc, the operator must decide whether the increased longevity is worth the extra money, factoring in details such as the reduction in downtime for changeover and the reduction in inventory for extra products. Many times, the more expensive ceramic flap disc provides the lowest overall cost of use when these factors are considered.
